SUMMARY

Full-stack developer with 2.5+ years of experience building scalable applications using Node.js and Python, delivering robust backend services and efficient data-driven solutions. I've developed high-performance APIs and optimized databases to improve system reliability and response times. My biggest achievement has been driving end-to-end backend features that streamlined workflows and handled complex business logic. I'm motivated by solving challenging problems, continuously learning, and building systems that scale seamlessly.

SKILLS

Python | Fast API | Javascript | Typescript | NoSQL | mYSQL | Node Js | EC2 | RabbitMQ | DSA | React |
Agile | Linux | Docker | Microservices | S3 | REST API | Sequelize | TypeORM

PROFESSIONAL EXPERIENCE

21K School, Full Stack Developer - Built and optimized ERP reporting modules using complex SQL queries, improving report generation speed and reliability - Developed the Summer Camp feature in Learning Garage, enabling seamless course purchases without affecting existing workflows - Led backend development for Learning Flowww, designing scalable APIs and robust system architecture - Implemented slot conflict resolution logic to handle overlapping schedules and improve booking accuracy - Integrated external APIs and optimized databases to ensure real-time data consistency and high-performance backend operations	03/2026 – Present Bengaluru
Wemotive Technologies, Software Developer - Built backend from scratch for a University of Miami research project, handling data modeling and APIs, improving response time by 50% - Developed key features for a hospital management system, including scheduling and availability, optimizing APIs by 20–30% - Designed and implemented advanced payment workflows for a cab platform, enhancing user experience and system reliability - Contributed to ONDC logistics integration, building a scalable Order Management System for complex, multi-step workflows - Developed RESTful APIs, managed async operations and integrations, and deployed production-ready applications using Docker	04/2023 – 02/2026 Pune

PROJECTS

Coupon Management System  - Built a scalable coupon engine using Node.js and TypeScript, supporting flexible discount types like cart-wise, product-wise, and BxGy - Implemented robust validation and precise pricing logic with strong Jest test coverage to ensure accuracy and reliability	10/2025 – 11/2025
Medicine Reminder & Refill Management System  - Built a production-grade FastAPI backend for medicine tracking and refill prediction with secure JWT auth and optimized MySQL performance - Implemented automated stock monitoring with real-time alerts, ensuring timely refills and improving system reliability	11/2025 – 12/2025
Learning Flowww - Led backend development as Dev Lead for Learning Flowww, designing the complete ERD, database schema, and scalable backend architecture for the 21K School enrollment platform - Implemented critical backend workflows including payment gateway integration, invoice generation, and unique enrollment ID creation after successful registration payments	04/2025 – 05/2025

EDUCATION

Bachelor Of Technology, Information Technology, Central Institute of Technology	07/2017 – 08/2021 Kokrajhar, Inida
